DLO4135 / DLG4137

DLO7135 / DLG7137

## FEATURES

- 5 x 7 Dot Matrix Characters  
DLO4135/DLG4137: 10.92 mm (0.43") High  
DLO7135/DLG7137: 17.27 mm (0.68") High
- Wide Viewing Angle  $\pm 75^\circ$
- 96 Character ASCII Set  
Upper Case and Lower Case Characters
- Fully Encapsulated, Rugged Solid Plastic Package
- Built-in Memory
- Built-in Character Generator
- Built-in Multiplex and LED Drive Circuitry
- Built-in Lamp Test
- Intensity Control (4 levels)
- Microprocessor Bus Compatible
- Intensity Coded for Display Uniformity
- Single 5-Volt Power Supply
- X/Y Stackable
- Available in Super-red and Green

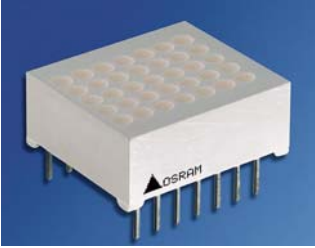

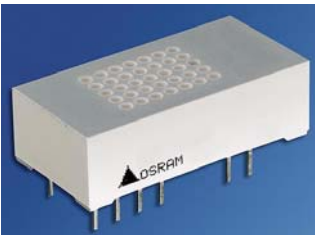

## DESCRIPTION

The DLX413X/DLX713X are single digit 5 x 7 dot matrix Intelligent Display devices. The DLX413X character is 10.92 mm (0.43") high. The DLX713X character is 17.27 mm (0.68") high. The built-in CMOS integrated circuit contains memory, ASCII character generator, LED multiplexing and drive circuitry; thereby eliminating the need for additional circuitry. They will display the 96 ASCII characters.

These devices are TTL and microprocessor compatible and offer the possibility of cascading the displays, allowing for multi-character messages. These displays were designed for viewing distances of up to 20 feet (DLX413X) or 30 feet (DLX713X). They require a single 5-volt power supply and parallel ASCII input.

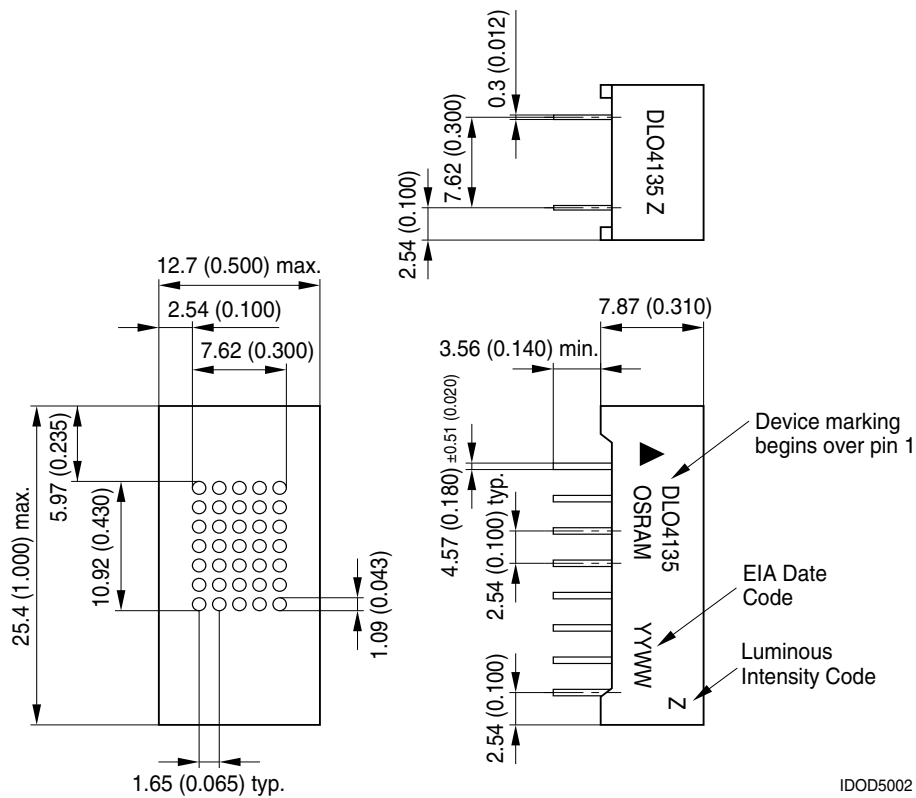

**Important:** Refer to Appnote 18, "Using and Handling Intelligent Display Devices" at [www.osram-os.com](http://www.osram-os.com). Since this is a CMOS device, normal precautions should be taken to avoid static damage.

## Ordering Information

	Type	Color of Emission	Character Height mm (inch)	Ordering Code
	DLO7135	super-red	10.92 (0.68)	Q68000A7157
	DLG7137	green		Q68000A7159
	DLO4135	super-red	17.27 (0.43)	Q68000A4297
	DLO7135	green		Q68000A4299

## Notes:

1. "Off Axis Viewing Angle" definition: The minimum angle in any direction from the normal to the display surface at which any part of any dot in the display is not visible.
2. **This display contains a CMOS integrated circuit. Normal CMOS handling precautions should be taken to avoid damage due to high static voltages or electric fields. See Appnote 18 at [www.osram-os.com](http://www.osram-os.com) under Intelligent Displays.**
3. Unused inputs must be tied to an appropriate logic voltage level (either V + or GND).
4.  $V_{CC}=5.0\text{ Vdc} \pm 10\%$ .
5. Clean only in water, isopropyl alcohol, TE (or equivalent).

## Lamp Test

When the lamp test ( $\overline{LT}$ ) is activated, all dots on the display are illuminated at 1/7 brightness. The lamp test function is independent of write ( $\overline{WR}$ ) and the settings of the blanking inputs ( $\overline{BL0}$ ,  $\overline{BL1}$ ).

This convenient test gives a visual indication that all dots are functioning properly. Lamp test also may be used as a cursor function or pointer which does not destroy previously displayed characters.

## Dimming and Blanking the Display

Brightness Level	$\overline{BL1}$	$\overline{BL0}$
Blank	0	0
1/7 Brightness	0	1
1/2 Brightness	1	0
Full Brightness	1	1

## Loading Data

Loading data into the display is straightforward. Chip enable ( $\overline{CE}$ ) should be present and stable during a write pulse ( $\overline{WR}$ ). Parallel data information should be stable for the minimum time ( $T_w$ ) and held for TDH after write has gone high. No synchronization is necessary and each character will continue to be displayed until it is replaced with another. Multiple displays may be stacked together with only an additional decoder IC for chip enable decoding.

Note:

Either  $\overline{BL0}$  or  $\overline{BL1}$  should be held high for display to light up.

**Attention please!**

The information describes the type of component and shall not be considered as assured characteristics. Terms of delivery and rights to change design reserved. Due to technical requirements components may contain dangerous substances. For information on the types in question please contact our Sales Organization. If printed or downloaded, please find the latest version in the Internet.

## Packing

Please use the recycling operators known to you. We can also help you – get in touch with your nearest sales office. By agreement we will take packing material back, if it is sorted. You must bear the costs of transport. For packing material that is returned to us unsorted or which we are not obliged to accept, we shall have to invoice you for any costs incurred.

**Components used in life-support devices or systems must be expressly authorized for such purpose!** Critical components<sup>1)</sup> may only be used in life-support devices or systems<sup>2)</sup> with the express written approval of OSRAM OS.

1) A critical component is a component used in a life-support device or system whose failure can reasonably be expected to cause the failure of that life-support device or system, or to affect its safety or the effectiveness of that device or system.

2) Life support devices or systems are intended (a) to be implanted in the human body, or (b) to support and/or maintain and sustain human life. If they fail, it is reasonable to assume that the health and the life of the user may be endangered.
