Military 54F158A

Quad 2-Input Data Selector/Multiplexer With Inverted Outputs

ELECTRICALLY TESTED PER:
MIL-M-38510/33904

The 54F158A is a high-speed quad 2-input multiplexer. It selects four bits of data from two sources using the common Select and Enable inputs. The four buffered outputs present the selected data in the true inverted form. The 'F158A can also be used to generate any four of the 16 different functions of two variables.

FUNCTIONAL DESCRIPTION

The F158A is a quad 2-input multiplexer. It selects four bits of data from two sources under the control of a common Select input (S) and presents the data in inverted form at the four outputs. The Enable input (\bar{E}) is active LOW. When \bar{E} is HIGH, all of the outputs (\bar{Z}) are forced HIGH regardless of all other inputs. The F158A is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels

supplied to the Select input.

A common use of the F158A is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The F158A can generate Four functions of two variables with one variable common. This is useful for implementing gating functions.

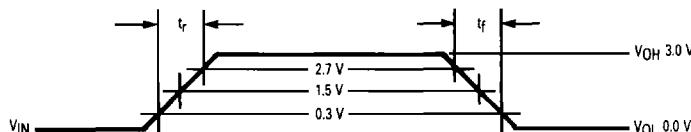

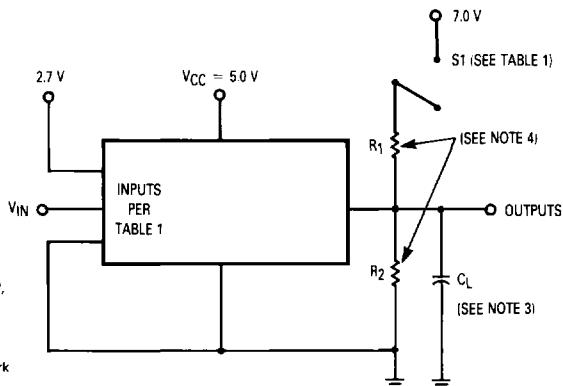

AC TEST CIRCUIT

Table 1

Test Type	S1
t _{PLH}	open
t _{PHL}	open
t _{PHZ}	open
t _{PZH}	open
t _{PLZ}	closed
t _{PZL}	closed

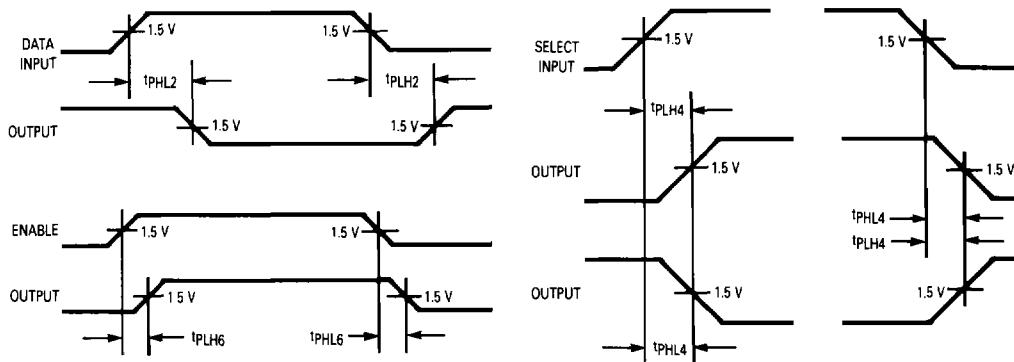

NOTES:

1. V_{IN} = Input pulse and has the following characteristics:
PRR ≤ 1.0 MHz, $t_f = t_r \leq 2.5$ ns, $Z_{IN} \approx 50 \Omega$.
2. Terminal conditions (pins not designated may be high ≥ 2.0 V, low ≤ 0.8 V, or open).
3. $C_L = 50$ pF $\pm 10\%$ including scope probe, wiring and stray capacitance, without package in test fixture.
4. $R_1 = R_2 = 499 \Omega \pm 5.0\%$.
5. Voltage measurements are to be made with respect to network ground terminal.
