

## Mini slide DGST

**FESTO**

Festo Core Range  
Solves the majority of your automation tasks

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Worldwide: Quickest delivery – wherever, whenever  
Simply good: Expected high Festo quality  
Fast: Easy and fast to select

Just look  
for the  
star!

## Key features

## At a glance

- Compact mini slide
- Slide and yoke plate as a single component
- Excellent value for money
- High feed forces
- Symmetrical mounting interfaces
- Precise and resilient roller bearing guide
- Simple design with symmetrical mounting interfaces
- Can be operated without additional cushioning components

## The technology in detail

[1] Slide and yoke plate

- Slide and yoke plate as a single component, ensuring very high rigidity, precision and alignment

[2] Supply ports

- All connections on one side

[3] Sensor slots for sensing the slide position

- Proximity switches can be integrated, so there are no projecting parts
- Both end positions can be sensed from one side
- Two sensor slots for sensing

[4] Cushioning and precision end-position adjustment

- Cushioning types:
  - Elastic cushioning rings/plates at both ends (P)
  - Elastomer cushioning, adjustable at both ends, with fixed stop (P1)
  - Elastomer cushioning, short, at both ends (E)
  - Elastomer cushioning, at both ends, stroke not adjustable (E1)
  - Shock absorber, self-adjusting, linear, at both ends, external (Y12)
- Precision end-position adjustment is possible from one end

[5] Twin-piston drive

- Theoretical force at 6 bar: 34 ... 590 N
- Max. payload: 0.7 ... 17 kg

[6] Backlash-free piston rod/yoke connection

- Enhanced precision
- Longer service life

## Version

[L] Mirror-imaged

- Position of the supply ports and sensor slots is mirror-inverted

## Mounting example

- Space-saving mounting of mini-slides next to one another

## Key features

### Axial supply ports via connection kit

→ Page 50

- The connection kit enables having axial supply ports
- Particularly suitable for applications in which no space is available at the side for supply ports

- [1] Connection set DADG-AK-G8-...  
[2] Seals  
[3] Screws

### Intermediate-position module

→ Page 52

The intermediate-position module enables an additional adjustable position within the stroke range.

- [1] Shock absorber retainer  
[2] Intermediate-position module

- The symmetrical design means that the intermediate position can be approached when advancing or retracting, depending on the assembly
- Can be travelled through from the end position
- Possible to continue on directly from the intermediate position
- Easy to assemble
- Sensing of the stop lever position is possible

### For manufacturing lithium-ion batteries

DGST-...-F1A

Recommended for production plants for manufacturing lithium-ion batteries. Metals with more than 1% by mass of copper, zinc or nickel are excluded from use. Exceptions are nickel in steels, chemically nickel-plated surfaces, printed circuit boards, cables, electrical plug connectors and coils.

#### Accessories

Your Festo contact partner can provide information about which accessories are suitable for manufacturing lithium-ion batteries.

### Application areas

Mainly in industry segments such as:

- Electronics and assembly technology
- Machine building
- Handling technology

Examples include the following:

- Pick & place handling units
- Piggyback handling units
- Precise positioning
- Precise press-fitting

### Application examples

Pick & Place handling unit

For cushioning DGST...-P/-P1/-E/-E1, the followi

Permissible impact velocity:

$$v = \sqrt{\frac{2 \cdot E}{m_1 + m_2}}$$

Maximum permissible mass:

$$m_2 = \frac{2 \cdot E}{v^2} - m_1$$

- v Permissible impact velocity
- E Maximum impact energy
- m<sub>1</sub> Moving mass (drive)
- m<sub>2</sub> Moving payload

 **Note**  
These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

For cushioning DGST...-Y12, the following app

Permissible impact velocity:

$$v = \sqrt{\frac{2 \cdot (E - (F + (m_1 + m_2) \cdot g \cdot \sin(\alpha)) \cdot s)}{m_1 + m_2}}$$

Maximum permissible mass:

$$m_2 = \frac{E - F \cdot s}{\frac{1}{2} \cdot v^2 + g \cdot s \cdot \sin(\alpha)} - m_1$$

- v Permissible impact velocity
- E Kinetic impact energy
- F Cylinder force minus friction force
- m<sub>1</sub> Moving mass (drive)
- m<sub>2</sub> Moving payload
- g Gravitational acceleration
- s Shock absorber stroke
- α Impact angle
- v Impact velocity

 **Note**  
These specifications represent the maximum values that can be achieved. The maximum permissible impact energy must be observed.

## Datasheet

### Perpendicularity

The term perpendicularity refers to the alignment accuracy between the slide surface and the yoke plate.

| Size | 6      | 8 | 10 | 12 | 16 | 20 | 25 |
|------|--------|---|----|----|----|----|----|
|      | ≤ 0.05 |   |    |    |    |    |    |

### Parallelism

The term parallelism refers to the alignment accuracy between the mounting surface and the slide surface in longitudinal direction.

| Size<br>Stroke [mm] | 6                      | 8        | 10       | 12       | 16        | 20        | 25        |

Note: The values apply in an unpressurised state. When variants DGST with external cushionings are supplied with compressed air, this may result in a pitching motion.

## Datasheet

### Adjustable end-position range

Precision adjustment of the advanced and retracted end positions

The required stroke reduction can be precisely adjusted with the cushioning components.

#### Advantages:

- No readjustment required; position is fully maintained under lock and load
- Stroke can be reduced to the next smaller standard stroke
- Fast and simple adjustment using two tools

#### Step 1:

Screw the cushioning component and sleeve into the holder using a hex wrench until the stop is reached

#### Step 2:

Set the exact end position using a smaller hex wrench

#### Step 3:

Secure the cushioning component by tightening the sleeve

### End-position adjustment

Dimensions:

For DGST-...-P: → page 38

For DGST-...-P1 → page 40

For DGST-...-E → page 42

For DGST-...-Y12: → page 44

#### Note

Adjust and secure the shock absorber under pressure.

Datasheet

Dynamic characteristic load values

The indicated torques refer to the centre of the guide.  
These values must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated

$$r = \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

r<sub>1</sub> = dynamic value  
F<sub>2</sub> = maximum value

Position of the guide centre

Calculation example

Assuming:

Mini slide = DGST-10-80  
Lever arm L<sub>x</sub> = 0.05 m  
Lever arm L<sub>y</sub> = 0.03 m  
Mass F<sub>z</sub> = 0.8 kg  
Acceleration a = 0 m/s<sup>2</sup>

Sought:

F<sub>y</sub>, F<sub>z</sub>, M<sub>x</sub>, M<sub>y</sub>, M<sub>z</sub>  
and  
Verification of operation with combined load

Solution:

L21 = 0.1102 m from table

F<sub>y</sub> = 0 N

F<sub>z</sub> = m x g  
= 0.8 kg x 9.81 m/s<sup>2</sup> = 7.848 N

M<sub>x</sub> = m x g x L<sub>y</sub>  
= 0.8 kg x 9.81 m/s<sup>2</sup> x 0.03 m = 0.236 Nm

M<sub>y</sub> = m x g x (L21 - L<sub>x</sub>)  
= 0.8 kg x 9.81 m/s<sup>2</sup> x (0.1102 m - 0.05 m) = 0.47 Nm

M<sub>z</sub> = 0 Nm

$$r = \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$$= 0 + \frac{7.848 \text{ N}}{620 \text{ N}} + \frac{0.236 \text{ Nm}}{6 \text{ Nm}} + \frac{0.47 \text{ Nm}}{5 \text{ Nm}} + 0 = 0.148 \leq 1$$

| Permissible forces and torques |                |                                                                      |                                       |                                                                       | Geometric characteristics |             |

1) At an operating pressure of 6 bar for variant E1. For the other cushioning variants, LD1 applies → page 38 ff.

2) Not available in sizes 6 and 8 with stroke 10 mm. For size 16 with stroke 80 ... 150 mm, the dimension is 14.5 mm

3) Max. screw-in depth

Datasheet

Dimensions

[L] Mirror-imaged

Technical drawing of the Mini slide DGST showing top, front, and side views with dimensions L1, L7, L8, L9, L10, H7, T4, G2, EE, T5, T11, H5, and H4. Callouts 1 and 11 are used to identify specific features.

+ = plus stroke length

[1] Supply ports

Note

In the mirror-inverted version, the supply ports and sensor slots are located on the opposite side when compared with the standard version. This enables the space-saving mounting of the mini-slides next to one another.

All further dimensions are identical to the standard version → page 18

1) Y12 Only in combination with a stroke of min. 30 mm

2) F1A Not in combination with E, P1, H1

3) H1 Not in combination with Y12

## Accessories

## Connection set DADG-AK-G8-...

Material:

Adapter: Epoxy resin

Seals: NBR

Screws: Coated steel

–  – Note:

Connection set DADG-AK-G8-... not in combination with DGST-...-L-... (mirror-inverted)

1) Packaging unit

## Mounting

To ensure that the shock absorber hits the middle of the stop lever, the following spacing must be complied with:

DGST-12/16: 10 mm

DGST-20/25: 15 mm

It is fastened on the mounting surface using 2 screws and centring sleeves. The shock absorber retainer is then attached to the slide of the mini slide using 4 screws and 2 centring sleeves.

## Precision adjustment:

The position can be precisely adjusted via the screw-in depth of the shock absorber. The shock absorber must protrude by at least 1.5 mm.

Accessories

Shock absorber retainer DADP

Material:  
Anodised wrought aluminium alloy  
RoHS-compliant

1) Packaging unit

**Note**

- A shock absorber retainer DADP-ES is additionally required when using an intermediate-position module
- Operation without cushioning components is not permitted
- Cushioning components are not included in the scope of delivery
- The size of the shock absorbers for the mini slides and for the relevant shock absorber retainer are identical. Shock absorber selection → page 55
- The same cushioning component as is used in the end positions of the mini slide is used for cushioning the intermediate position

## Accessories

## Accessories

## Position transmitters

The position transmitter continuously senses the position of the piston.

It has an analogue output with an output signal relative to the piston position.

## Accessories

Adapter kit  
DHAA

Material:  
Wrought aluminium alloy  
RoHS-compliant

"Further possible combinations can be found in the relevant PDFs for ERMB, DHRS, DHWS, DHPS, HGPD and HGPT."

## Note

The kit includes the individual mounting interface as well as the necessary mounting material.

## Accessories

Adapter kit  
DHAA

Material:  
Wrought aluminium alloy  
RoHS-compliant

"Further possible combinations can be found in the relevant PDFs for ERMb, DHRS, DHWS, DHPS, HGPD and HGPT."

## Note

The kit includes the individual mounting interface as well as the necessary mounting material.

## Permissible drive/drive combinations with adapter kit
