RM85

RM85-...-01 (AC) ①

RM85-...-01 (DC) ①

- Relays designed for continuous operation\*
- CTI 250 • Reinforced insulation • For PCB and plug-in sockets • AC and DC coils, insulation class F: 155 °C
- Available special versions: in transparent cover ①; with the increased dielectric strength of the contact clearance ② • Compliance with standards EN 60335-1, EN 45545-2 • Recognitions, certifications, directives: RoHS,

**Description of Fig. 4 and 5**

Using voltage other than the rated coil voltage may reduce the electrical life of the relay. Figure 4 shows the permissible voltage range for the relay coil, higher coil supply voltages may damage the coil insulation.

**A** - relations between make voltage and ambient temperature at no load on contacts. Coil temperature and ambient temperature are equal before coil energizing. Make voltage is not higher than the value read on Y axis (multiplication of rated voltage).

**B** - relations between make voltage and ambient temperature after initial coil heating up with  $1,1 U_n$  at continues load of  $I_n$  on contacts. Make voltage is not higher than the value read on Y axis (multiplication of rated voltage).

**1, 2, 3** - values on Y axis represent allowed overvoltage on coil at certain ambient temperature and contact load:

- 1 - no load
- 2 - 50% of rated load in AC1 category
- 3 - rated load in AC1 category

### PRECAUTIONS:

1. Ensure that the parameters of the product described in its specification provide a safety margin for the appropriate operation of the device or system and never use the product in circumstances which exceed the parameters of the product. 2. Never touch any live parts of the device. 3. Ensure that the product has been connected correctly. An incorrect connection may cause malfunction, excessive heating or risk of fire. 4. In case of any risk of any serious material loss or death or injuries of humans or animals, the devices or systems shall be designed so to equip them with double safety system to guarantee their reliable operation.
