### Product Overview

Mini-Circuits' JSW2-63VHDRG+ is a reflective symmetric MMIC SPDT switch with an internal CMOS driver designed for wideband operation from 5 to 6000 MHz. This model provides power handling up to 2.5W with low insertion loss, high dynamic range, and fast switching speed in a tiny 2x2mm 12-Lead MCLP package. JSW2-63VHDRG+ operates on a single positive supply voltage with low current consumption of just 120 $\mu$ A. Produced using a Silicon-on-Insulator process, it provides a high level of ESD protection and excellent repeatability.

The switching logic for this model sets the switch from COM to RF2 with control voltage in the low state and COM to RF1 with control voltage in the high state. Alternative model (JSW2-63VHDRP+) is also available with opposite switching logic for your convenience.
