Outlines

The current sensor is a sensor to measure the current as its name. However, The current is various. There is a current value up to 10k amperes treated in the power plant from 1mA, and the shape of current waves also has AC, DC, and AC + DC. Since a method and a structure the best in each measuring object are different, there are also various current sensors. Tamura supplies the sensor using the Hall-Effect system for measuring the current value from several amperes to several kilo-ampere.

The Hall-Effect current sensor measures the magnetic flux produced in proportion to the primary current without any direct contact with the primary circuit; the combination of the Hall element and magnetic circuit provide excellent solution for measuring AC/ DC current with galvanic isolation and zero insertion loss.

The diagram in Figure-1 depicts the Hall current sensor basic principle. The magnetic flux produced in proportion to the primary current, If, induced in the magnetic circuit, passes through the Hall element inserted in the gap of the magnetic circuit resulting in a potential difference, V_h, expressed by the following formula:

Applications

Current control and detection of over-current in various types of inverters. Used for general-purpose inverter, various types of power conversion equipment to control and to detect over-current. Also used to measure DC current from the battery.

- Various types of inverters (CVCF, vector), Industrial robots, automation, devices, NC
- UPS, Elevator, Laser Cutting Machines, Welding Machines, Various types of Regulated Power Supply
- Solar power generation systems, Wind power systems, Fuel cell systems

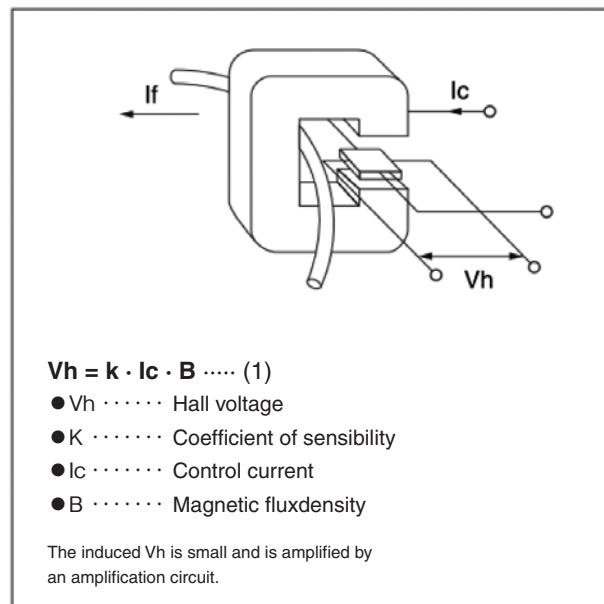

Figure-1

Features

Measurement of DC, AC (kHz range), & complex current (AC+DC). The lineup of rated currents ranges from a few A to over 1000 A.

- Galvanic isolation with many UL compliant configurations.
- Fast response time
- High Reliability

Circuit system

Tamura offers multiple current sensor options to meet application requirements: Open Loop or Linear type (magnetic proportionality); Closed Loop or Servo-type (magnetic balance) ; Flux-Gate(magnetic equilibrium).

Open loop

If the current is applied to the cable, the magnetic field proportional to the current in surroundings of the cable is generated on Ampere's rule. The magnetic core is set in surroundings of the cable to improve the sensitivity. The Magnetic field is converted into the voltage by the linear type - hall element is placed in the gap of the magnetic core. But the output voltage of hall element is several tens of milli-volt, It enlarges it to the output voltage of the product specification (several volts) by the operational amplifier.

The sensor output voltage is linearly proportional to the magnetic flux generated by the measured current. In general, the open loop sensor is voltage output. The characteristic (accuracy, linearity, response, temperature property, and high-frequency current^{*1}, etc.) of the current sensor is not a little better than that of other circuit methods because of the difference of the circuit configuration (magnetic circuit , magnetism-electric conversion and amplification of electrical circuit). However, the size can be reduced and it is lower-cost more than other circuit methods.

^{*1}-We use silicon steel and permalloy in internal magnetic core of the open-loop sensors in order to improve the measurement possible current and hysteresis error. Therefore, at the frequency of the applied current exceeds more than several KHz, there is a possibility that the internal circuit may be damaged by the heat generation of the core loss.

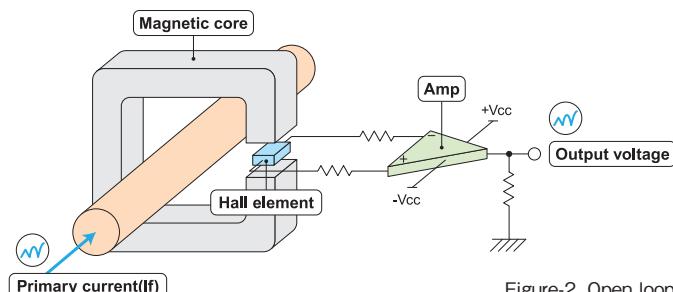

Figure-2. Open loop

Closed loop

The closed loop type current sensor measures the applied current on the condition that the magnetic flux density in the magnetic core is extremely zero. Therefore, there is no influence on accuracy by the non-linearity and hysteresis in the core because the flux density in the magnetic core operates in the starting point of the B-H curve in the operation region^{*1}. The characteristic of the closed loop type is better than the open loop type current sensor.

The addition of a secondary winding (1000-5000 turns) on the magnetic core allows feedback current to be supplied in opposition to measured current to compensate or cancel the magnetic flux generated by the measured current. The output of the closed loop sensor is a current output proportional to the measured current divided by the number of secondary winding turns^{*2}.

^{*1}-At the high-frequency current (1-2kHz or more) and the pulse current, current sensor should operate at ACCT (transformer) because the loop gain of the feedback control decreases. Under such a condition, the magnetic flux in the magnetic core is generated .

^{*2}-Output current = (Primary current) / (Secondary winding turns)

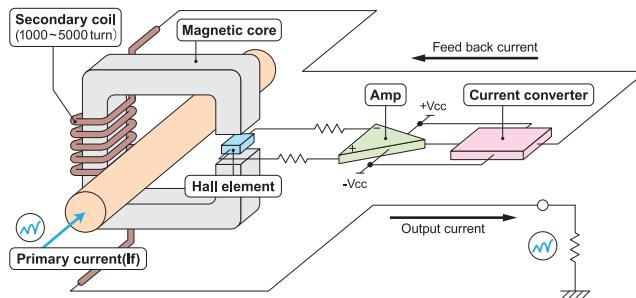

Figure-3. Closed loop

Fluxgate system

The flux-gate current sensor replaces the Hall element with probe coil made of highly saturable material. The magnetic offset of the probe coil does not occur in order to be driven by high-frequency current. The flux-gate utilizes a magnetic balance system to achieve high accuracy, temperature stable current output typically converted to a voltage output with an internal high precision resistor.

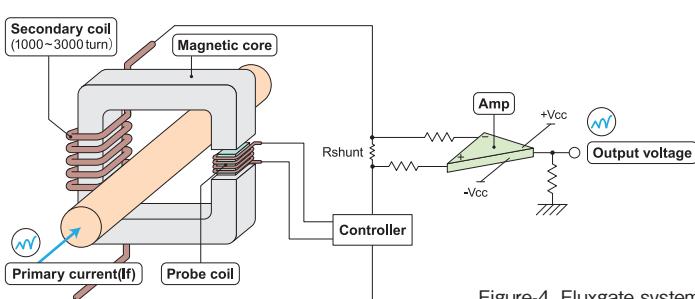

Figure-4. Fluxgate system

Application notes

<General Considerations>

1. The sensor uses polar electronic components. When the polarity of the power supply is mistaken, the sensor is damaged.
2. Static electricity or excessive voltage can increase an offset voltage in the Hall element, and cause offset voltage to change. Please exercise care in handling and application.
3. In order to prevent the influence of noise, the use of twisted cable or shielded cable for the output line is recommended
4. If using this device within a magnetic field generated by other devices, the specified accuracy may not be obtainable.
5. Our products (several models are excluded) are adjusted with the trimming method by the measurement condition (Load resistance, Power supply voltage) of specification sheets. Therefore, characteristics (Offset, Output, etc.) and its deviation may be changed in different circuit conditions from the measurement condition. All change characteristic items are not indicated on specification sheets.
6. The performance of current sensors with through-hole (aperture) is dependent on the position of the primary conductor. Tamura specifications are based on a primary conductor completely filling the through-hole (aperture) area.
7. The current sensor rated current in DC Amps.
8. Please use mating connector with equivalent terminal plating material to insure proper operation and avoid possibility of 'galvanic corrosion' .
9. Please do not store in high-temperature and high-humidity storage environment. Please use it after confirming soldering when it is kept for six months or more. (product soldered with substrate)
10. We recommend performing a zero offset adjustment by measuring the offset voltage at startup. In continuously operation for a few months, or at change of ambient temperature or humidity is large, we recommend regularly performing a zero offset adjustment at being idling (it is clear that the current is not apply) .
11. The current sensor doesn't have built-in protection circuit (devices and fuses, etc.). As a failure mode of the sensor, there is a short circuit and open state. In the case of a short-circuit state, the abnormal temperature rise of the internal parts is assumed, and there is a possibility to smoke and to ignite. If it is used in safety critical circuit blocks, please take appropriate measures by protection devices, protection circuits, etc. For closed loop -type sensors and flux gate (closed loop type) sensors, the consumption current of the secondary power supply varies in proportion to the measurement current.

<Open loop>

1. High frequency primary current may result in excessive heating in iron magnetic core and cause damage to internal circuitry; for high frequency applications select current sensor with ferrite core material.
2. If the measured current exceeds the rated current, magnetic core saturation will occur and the output voltage signal will not be linearly proportional to the measured current.

<Closed Loop>

1. For closed loop current sensors please insure the power supply voltage is balanced, symmetrical, and, applied simultaneously to avoid potential increase in DC offset error.
2. Maximum rated current measurement duration is timedependent. Maximum rated current applied in excess of the time limit can result in damage to internal electronic circuitry; please consult Tamura for assistance.
3. When using a measurement resistor to convert current output to voltage output select a resistor with stable temperature characteristic to insure accuracy of the output voltage.
4. Compensation current supplied to the secondary winding varies in proportion to the measured current based on the conversion ratio. (I_f/KN ; KN = secondary turns) Please insure the PSU has required current capacity to supply compensation current to the secondary winding.

<Flux-Gate>

1. Compensation current supplied to the secondary winding varies in proportion to the measured current. Please insure the PSU has required current capacity to supply compensation current to the secondary winding.
2. There is 450kHz ripple voltage present on the output and reference output voltage signals . An external capacitor maybe added if necessary.

Important Notice

1. The content of this information is subject to change without prior notice for the purpose of improvements, etc. Ensure that you are in possession of the most up-to-date information when using this product.
2. This product is intended to be used in general electronics applications (electric home appliances, business equipment, information equipment, communication terminal equipment, measuring devices, industrial equipment, and so on). This product is neither intended nor warranted for use in following equipment or devices:

Special application (such as for medical devices, transportation equipment, traffic signal control equipment, fire and crime prevention equipment, aeronautics and space devices, nuclear power control, fuel control, in-vehicle equipment, safety devices, and so on) in which extremely high quality and high reliability is required, or if the malfunction or failures of product could be cause loss of human life, bodily injury.

Tamura Corporation shall not be held responsible for any damage incurred by customers or any third party when products are used in special application, unless specifically permitted in this document.
3. Tamura Corporation constantly strives to improve quality and reliability, but malfunction or failures are bound to occur with some probability in current sensor. To ensure that failures do not cause accidents resulting in injury or death, fire accidents, social damage, and so on, users are to thoroughly verify the safety of their designs in devices and/or systems.
4. The operation examples and circuit examples shown in this information are for reference purposes only, and Tamura Corporation disclaims all responsibility for any violations of industrial property rights, intellectual property rights and any other rights owned by Tamura Corporation or third parties that these may entail.
5. The circuit examples and part constants listed in these specifications are provided as reference for the verification of characteristics. The user is to perform design, verification, and judgment under his or her own responsibility, taking into account the various conditions.
6. The products are designed for use in environments where consumer electronics are commonly used. It is not designed for use in special environments such as listed below, and if such use is considered, the user is to perform thorough safety and reliability checks under his/her responsibility.

7. This product is not designed to resist radiation.
 - Use in liquids such as water, oil, chemical solutions, or organic solvents, and use in locations where the product will be exposed to such liquids.
 - Use that involves exposure to direct sunlight, outdoor exposure, or dusty conditions.
 - Use in locations where corrosive gases such as sea winds, Cl₂, H₂S, NH₃, SO₂, or NO₂, are present. (Some product improves durability)
 - Use in environments with strong static electricity or electromagnetic radiation.
 - Use that involves placing inflammable material next to the product.
 - Use of this product either sealed with a resin filling or coated with resin.
 - Use of water or a water soluble detergent for flux cleaning.
 - Use in locations where condensation is liable to occur.
8. Do not use or otherwise make available the TAMURA products or the technology described in this document for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of mass destruction weapons (e.g. nuclear, chemical, or biological weapons or missile technology products). When exporting and re-exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations including, without limitation, Japan -Foreign Exchange and Foreign Trade Control Law and U.S.- Export Administration Regulations. The TAMURA products and related technology should not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
9. Please contact your TAMURA sales office for details as to environmental matters such as the RoHS compatibility of Product. Please use TAMURA products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. TAMURA assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
10. TAMURA assumes no liability for damages or losses incurred by you or third parties as a result of unauthorized use of TAMURA products.
11. This document and any information herein may not be reproduced in whole or in part without prior written permission from TAMURA.

Note

Models F01P; may be followed by 006, 015, 025 or 050, followed by S05, may be followed by D, or L, may be followed by slash and any numbers from 01 through 99 or blank. Models F02P; followed by 001 through 050 or 1R1 through 49R9, followed by S05, may be followed by D, L, -P0, -P1, -P2, -P3, -P4, -P5, -P6, -P7, -P8, -P9, -PA, -PB, -PC, -PD, -PE or -PF, may be followed by slash and any numbers from 01 through 99 or blank. Models F03P(2); followed by 001 through 075 or 1R1 through 74R9, followed by S05, may be followed by -PF, may be followed by slash and any numbers from 01 through 99 or blank. Models F03P; followed by 006, 015, 025 or 050, followed by S05, may be followed by D, L, -P1, -P2, -P3, -P4, -P5, -P6, -P7, -P8, -P9, -PA, -PB, -PC, -PD, -PE or -PF, may be followed by slash and any numbers from 01 through 99 or blank, may be prefixed by V. Models L18P(without cover); followed by 001 through 065 or 01R1 through 65R1, followed by D or S, followed by 05, 12 or 15, may be followed by A, B, H, L, -OP, P, R, S, T, W or V, may be followed by /XX, -XX, /DE or /LS, where "XX" maybe 0 through 99, represent the modified products, or A through ZZ, represent special code from customer. Models L18P(with cover); Current Transducers, (S)L18P series, Models L18P or SL18P, followed by 001 through 060 or 01R1 through 59R9, followed by D or S, followed by 05, 12 or 15, may be followed by A, B, C, H, L, -OP, P, R, S, T, W or V, may be followed by /XX, -XX, /DE or /LS, where "XX" maybe 0 through 99, represent the modified products, or A through ZZ, represent special code from customer. Models L32P; L32PxxxS05Bzz, L32PxxxS05BzzK, L32PyyyS05zz, where "xxx" maybe 001 through 200, where "yyy" maybe 001 through 400, where "zz" maybe F, S, FS or blank. All models maybe followed by /xx, where "xx" maybe 0 through 99, or A through ZZ, represent special code from customer. Models L37S and L37P; may be followed by "/" and two digits letter(s) and/or number(s) may be followed by five digits "-", "/" and/or letter(s). Models L51S; followed by 010 through 990, 1T0 through 4T9 or 5T0, followed by D15, may be followed by C or L, followed by J, M or M-A, may be followed by 1, may be followed by W. Models L51S(2); followed by 010 through 990, 1T0 through 2T9 or 3T0, followed by D15, may be followed by C or L, followed by Y, may be followed by 1, may be followed by W. Models L52S; followed by 100 to 999, 1001 to 1999, 2001 to 2999, 1T0 to 1T9, 2T0 to 2T9 or 3T0, followed by D15, D15M, D15M-A or D15S, may be followed by "-", "/", number(s) and/or letter(s). Models L55S; followed by 500 through 999, 1001 through 1999, 2001 through 2999, 3001 through 3999, 4001 through 4999, 1T0 through 1T9, 2T0 through 2T9, 3T0 through 3T9, 4T0 through 4T9 or 5T0, followed by D15M or D15M-A, may be followed by "-", "/", number(s) and/or letter(s). Models LA16P; followed by 001 through 100 or 1R1 through 99R9, followed by S, followed by 05 or 03, maybe followed by "-", "/", number(s) and/or letter(s). Models LA17P; followed 01 through 199, followed by R, followed by 1 through 9, followed by S05 or S05P, may be followed by 0 through 8, may be followed by five digits "-", "/" and/or letter(s).

Note

For models LA16P, LA17P and LA37S, see note on page 1 and 2.

According to UL508 standard and CSA C22.2 No.14 standard

Conditions of Acceptability

- When installed in the end-use equipment, consideration shall be given to the following:

Common terms

- 1 The devices have been evaluated for use in pollution degree 2 environment only.
- 2 A suitable enclosure shall be provided in the end-use application
- 3 The terminals have not been evaluated for field wiring.
- 4 The devices are not intended to be used with any wire as the feed-through coil wound onto the Case.
- 5 The secondary sensing circuit shall be powered by an Isolated Secondary Circuit such as Limited Voltage/Current circuit or Limiting Impedance circuit.
- 6 The required clearance and creepage distance between primary conductor and the secondary circuits shall be maintained in the end-use application.
- 7 The housing of the female connector provided by the end-product shall be evaluated as a barrier under the end-application Standard in the end-use application, in case the clearance and/or the creepage distance do not meet the requirements of the end-application Standard.

Please refer to the next section for other items. If you have any question, please contact distributor or sales office.

CAUTION

Fluxgate system / Voltage-output type, Anti-Surge current, Compact

F01P S05L, F02P S05L, F03P S05L SERIES

F01PxxxS05L

F02PxxxS05L

F03PxxxS05L

RoHS

- Backward compatible to F01PxxxS05, F02PxxxS05, F03PxxxS05 Series.
- Anti-Surge current (4kAT, 8/20uS, single)
- Mounting area reduced, however, pin compatibility. Longitudinal dimension reduced.

- Super precision & High stability (Low temperature drift) .
- Unipolar power voltage; +5V. Rated Current; 6 ~ 50A. Multi-range models. MAX_Temp.105°C . Voltage-output type.
- F01PxxxS05L series are designed by the pin compatibility as high-end models of S22PxxxS05M2 series.

Comparison of the main features

Series	Features
F01PxxxS05L	Without reference access.
F02PxxxS05L	With reference access, Ref_in / Ref_out.
F03PxxxS05L	With reference access, Ref_in / Ref_out. Higher creepage and clearance distances.

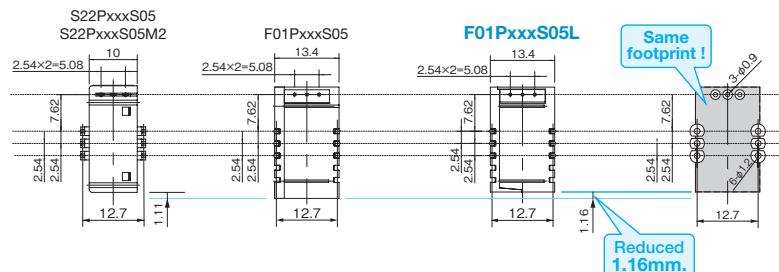

***: Rated Current symbol

SPECIFICATIONS

Spec	Types	Value				
		F01PxxxS05L	F02PxxxS05L	F03PxxxS05L		
Maximum peak current		4kAT (2kA × 2. Number of primary tunes is two tunes.)				
Rated Current If (xxx: Rated Current symbol)		6A (006) / 15A (015) / 25A (025) / 50A (050)				
Maximum current (At Vcc=+5V, Ta=+105°C)		± 20A (If=6A) / ± 51A (If=15A) / ± 85A (If=25A) / ± 150A (If=50A)				
Existence of reference access	No		Yes			
Number of primary busbar		3pcs	4pcs			
Clearance distance, Primary ⇄ Secondary	7.7mm	7.5mm	8.2mm			
STANDARDS	UL508 (file No. E243511), EN50178, EN61010-1, EN60950-1					
Ambient operating temperature	− 40°C ~ +105°C					

Mounting area

The mounting area has been reduced more than the F01P / F02P / F03PxxxS05 series. However, the F01P / F02P / F03PxxxS05L series series are 100% compatible with the F01P / F02P / F03PxxxS05series in regards to the footprint mounting.

The F02P/F03PxxxS05L series also similarly reduces the mounting area.

The above-mentioned comparison tables are the auxiliary data for understanding each series. For details, please confirm the next page or subsequent ones. ►►►

Reference voltage

The Ref pin has two modes Ref IN and Ref OUT :

< Ref OUT mode >

The 2.5V internal precision reference is used by the transducer as the reference point for bipolar measurements;

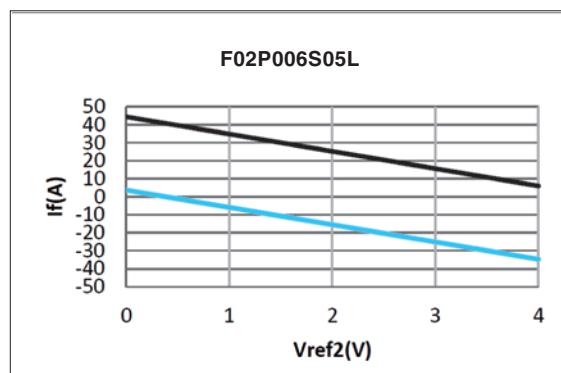

< Ref IN mode >

An external reference voltage is connected to the Ref pin; this voltage is specified in the range 0 to 4 V , its voltage is used as the reference voltage at the time of measurement.

-either to source a typical current of $(V_{ref} - 2.5) / 680$, the maximum value will be 2.2mA typ.when $V_{ref2} = 4V$.

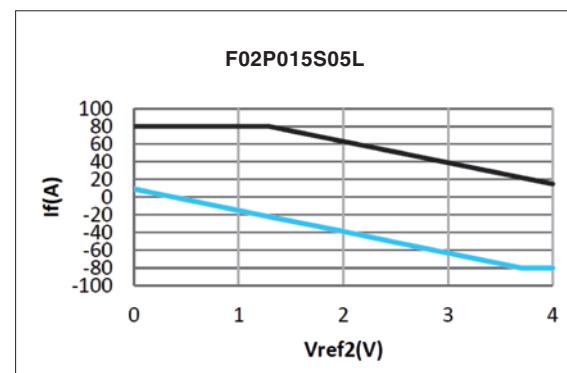

-or to sink a typical current of $(2.5 - V_{ref2}) / 680$, the maximum value will be 3.68mA typ.when $V_{ref2} = 0V$.

The following graphs show how the measuring range of each transducer version depends on external reference voltage value V_{ref2} .

Upper limit : $I_p = -9.6 \times V_{ref2} + 44.4$ ($V_{ref2} = 0...4V$)

Lower limit : $I_p = -9.6 \times V_{ref2} + 3.6$ ($V_{ref2} = 0...4V$)

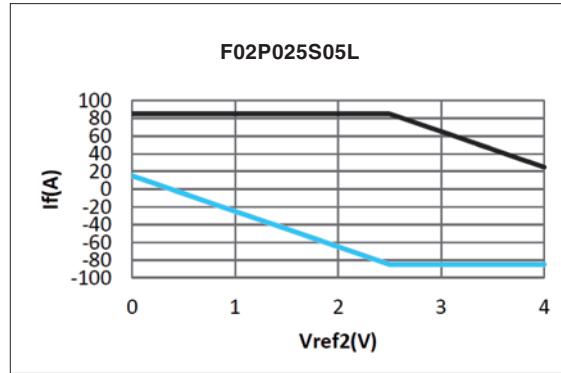

Upper limit : $I_p = 80$ ($V_{ref2} = 0...1.29V$)

$I_p = -24 \times V_{ref2} + 111$ ($V_{ref2} = 1.29...4V$)

Lower limit : $I_p = -24 \times V_{ref2} + 9$ ($V_{ref2} = 0...3.7V$)

$I_p = -80$ ($V_{ref2} = 3.7...4V$)

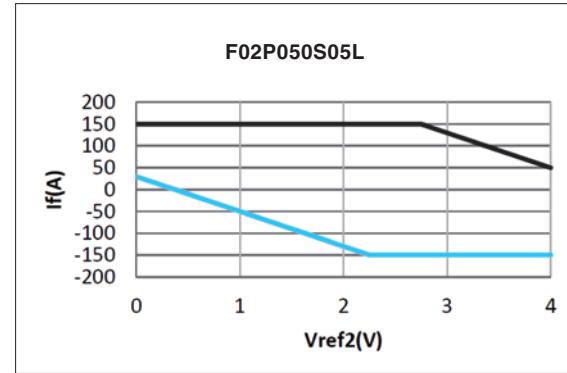

Upper limit : $I_p = 85$ ($V_{ref2} = 0...2.5V$)

$I_p = -40 \times V_{ref2} + 185$ ($V_{ref2} = 2.5...4V$)

Lower limit : $I_p = -40 \times V_{ref2} + 15$ ($V_{ref2} = 0...2.5V$)

$I_p = -85$ ($V_{ref2} = 2.5...4V$)

Upper limit : $I_p = 150$ ($V_{ref2} = 0...2.75V$)

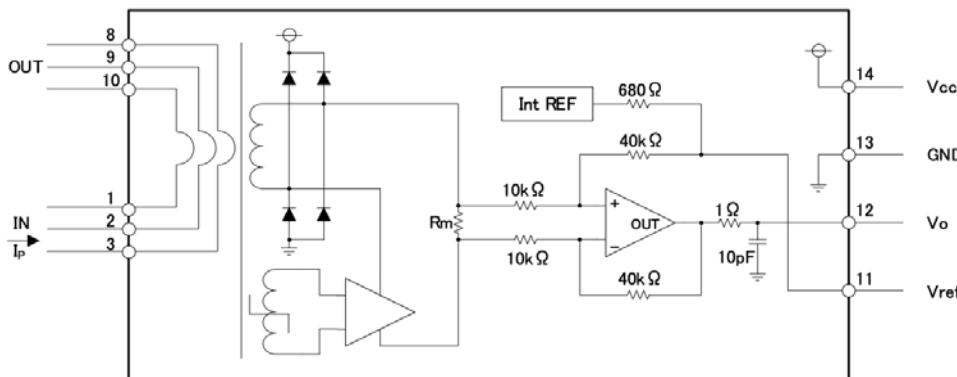

$I_p = -80 \times V_{ref2} + 370$ ($V_{ref2} = 2.75...4V$)

Lower limit : $I_p = -80 \times V_{ref2} + 30$ ($V_{ref2} = 0...2.25V$)

$I_p = -150$ ($V_{ref2} = 2.25...4V$)

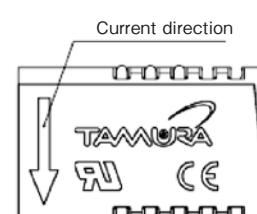

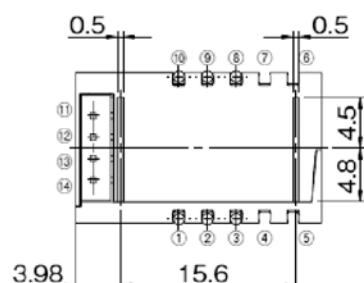

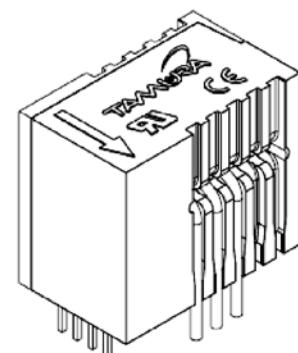

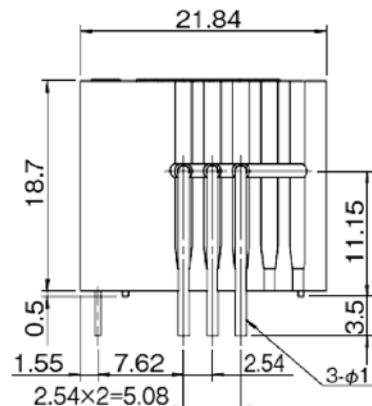

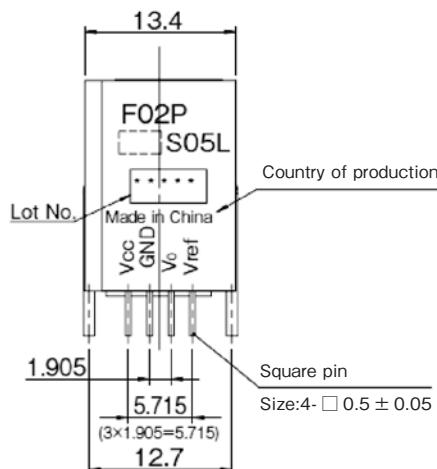

If you do not want to use the Ref pin, please unconnected.

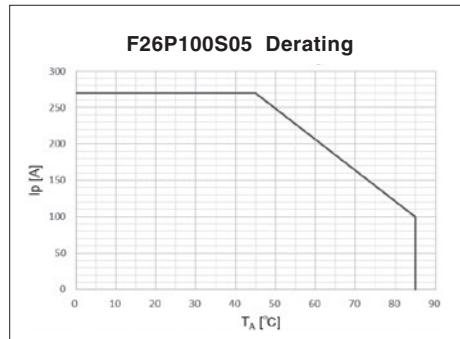

Figure 5 : I_p vs T_A for F26P100S05

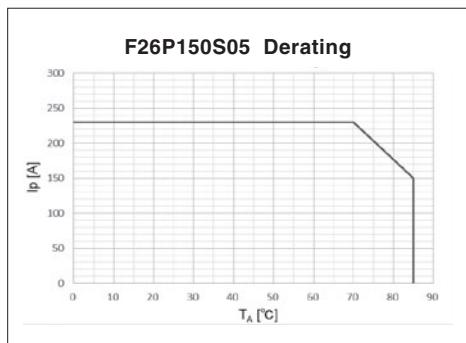

Figure 6 : I_p vs T_A for F26P150S05

According to which the following conditions are true the maximum repetitive primary current plot shows the boundary of the area.

- ① I_p < I_{pm}
- ② Junction temperature T_j < 125°C
- ③ Resistor power dissipation < 0.5 x rated power

SUPPORT DOCUMENTATION

Reference voltage

The Ref pin has two modes Ref IN and Ref OUT.

< Ref OUT mode >

The 2.5 V internal precision reference is used by the transducer as the reference point for bipolar measurements.

< Ref IN mode >

An external reference voltage is connected to the Ref pin. this voltage is specified in the range 0 to 4 V. its voltage is used as the reference voltage at the time of measurement.

- either to source a typical current of $(V_{ref2}-2.5)/680$,the maximum value will be 2.2 mA typ.when $V_{ref2} = 4$ V.
- or to sink a typical current of $(2.5-V_{ref2})/680$,the maximum value will be 3.68 mA typ.when $V_{ref2} = 0$ V.

The following graphs show how the measuring range of each transducer version depends on external reference voltage value V_{ref2} .

$R_L=1\text{ k}\Omega$, $V_{CC}=+5\text{ V}$, $T_A=-40 \sim +85^\circ\text{C}$

SUPPORT DOCUMENTATION

Information on F26PxxxS05A series.

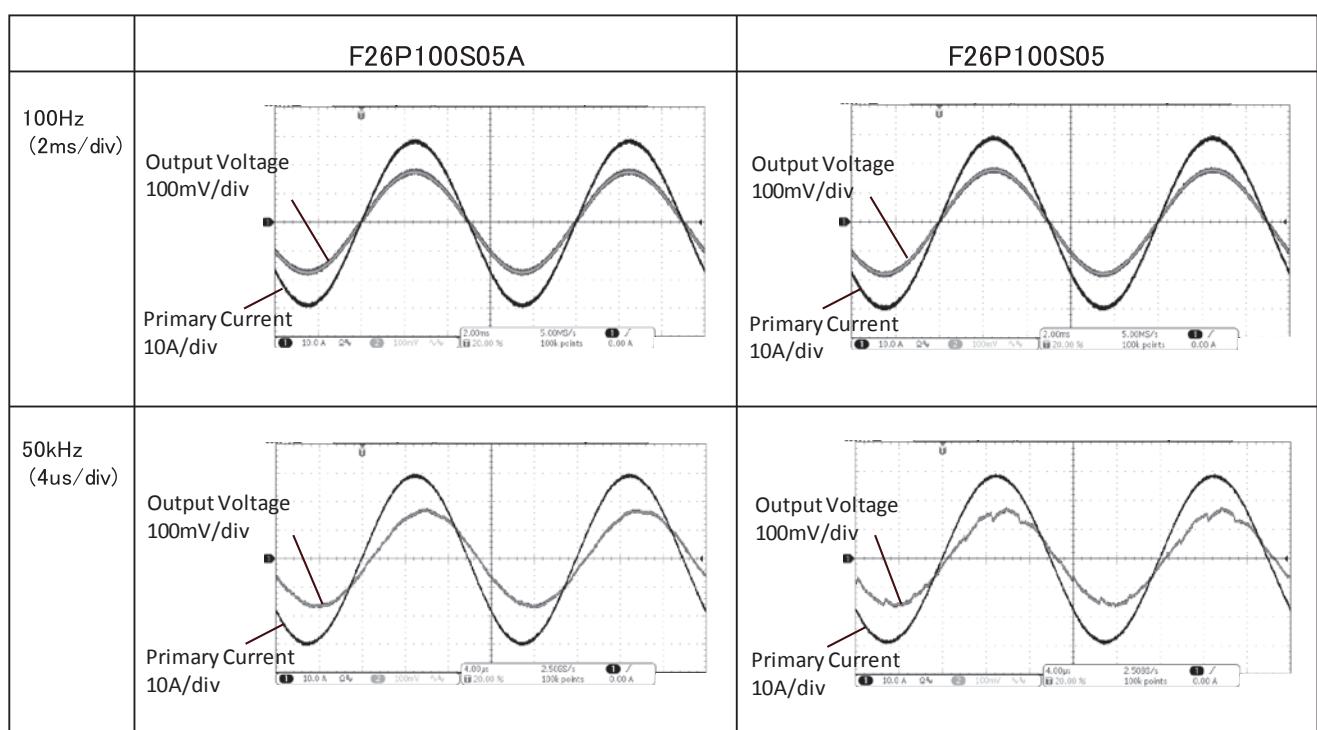

F26PxxxS05A series is a model that output voltage waveform distortion improvement of the F26PxxxS05 series.

Please select according to the application.

e. g. F26P100S05A

Measurement condition $T_A=25\text{ }^\circ\text{C}$ $R_L=1\text{ k}\Omega$ $I_p=20\text{ A}$ $V_{cc}=+5\text{ V}$

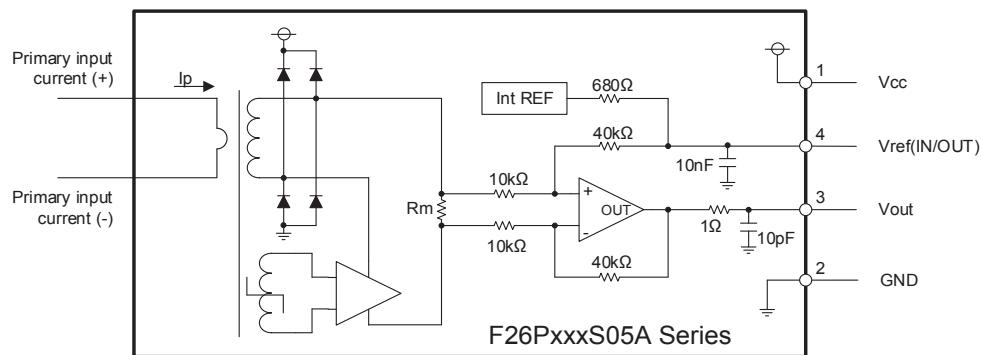

Primary conductor (bus bar) cross sectional area is as same as through hole, and penetration with 1turn in through hole.

Differences occur depending on the conditions of the primary conductor (busbar).

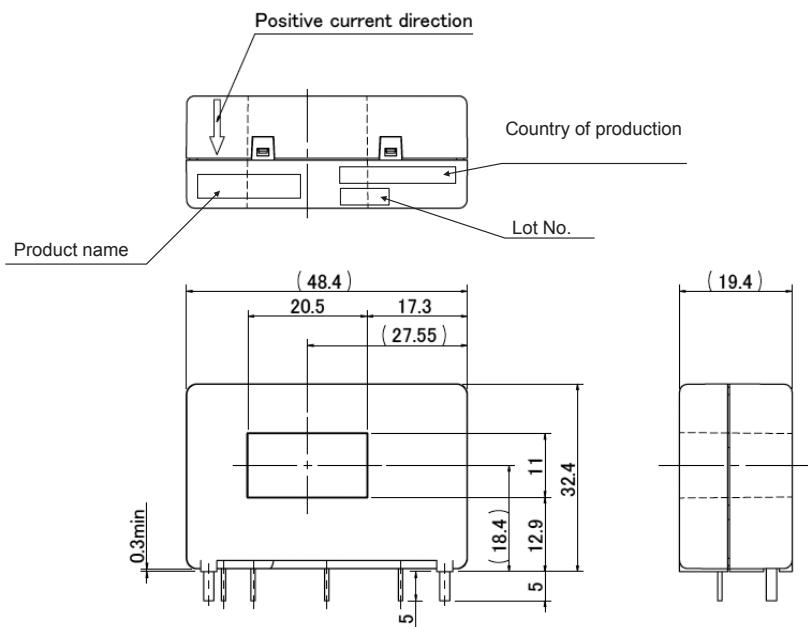

Please use it after actual machine verification.

Hysteresis error (at 0A → If → 0A)	Voh			≤ ± 10mV		≤ ± 5.0mV		≤ ± 2.5mV
Insulation voltage	Vd			AC2500V for 1 minute (Sensing current 0.5mA)	Primary ⇔ Secondary			
Insulation resistance	R _{IS}				≥ 500M Ω (at DC500V)	Primary ⇔ Secondary		
Ambient Operating temperature	T _A					- 40 ~ + 85°C		
Ambient storage temperature	T _s					- 40 ~ + 85°C		

* 1 It is possible to change Vof with an external reference voltage (between 1.5V - 2.8V providing its ability to sink or source approximately 5 mA.) . If the external reference voltage is not used, the Vref pin should be left unconnected. * 2 Offset voltage value is after removal of core hysteresis. * Please refer to the another sheet about conditions of UL Recognition. * Anti-Sulfurated (Used resistors : Gold internal Electrodes) * Ferrite core is used.

SUPPORT DOCUMENTATION

Reference voltage

The Ref pin can be used as Ref OUT mode and/or Ref IN mode.

<Ref OUT mode>

The 2.5 V internal reference is used by the transducer as the reference point for bipolar measurements.

<Ref IN mode>

An external reference voltage is connected to the Ref pin. This voltage is specified in the range 0.5 to 2.65 V, its voltage is used as the offset voltage at the measurement.

The following graphs (Fig 1) show the output voltage (@ $I_p = 0A$) and the reference input / output current due to the external reference voltage value V_{ref2} .

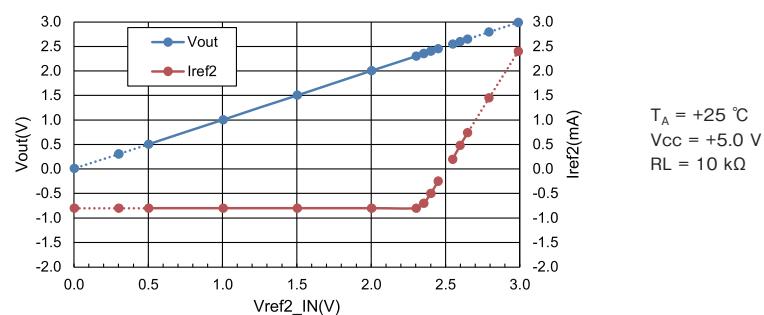

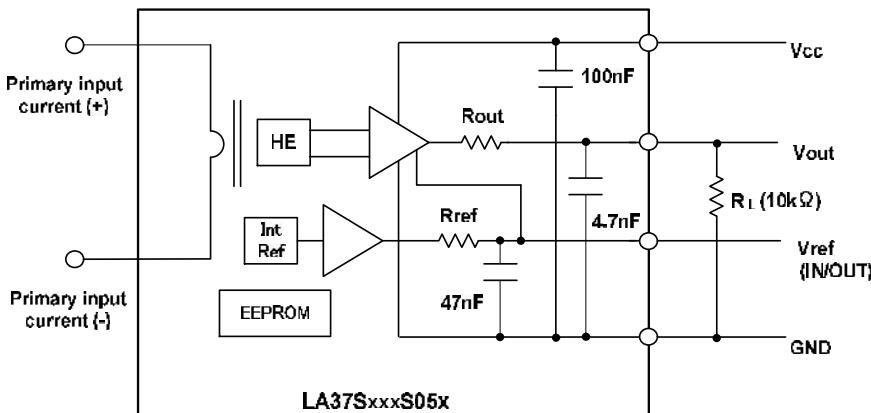

Fig 1 : V_{ref2} input voltage vs Output voltage and I_{ref2} (= V_{ref2} current)
(Typical performance)

CONNECTION

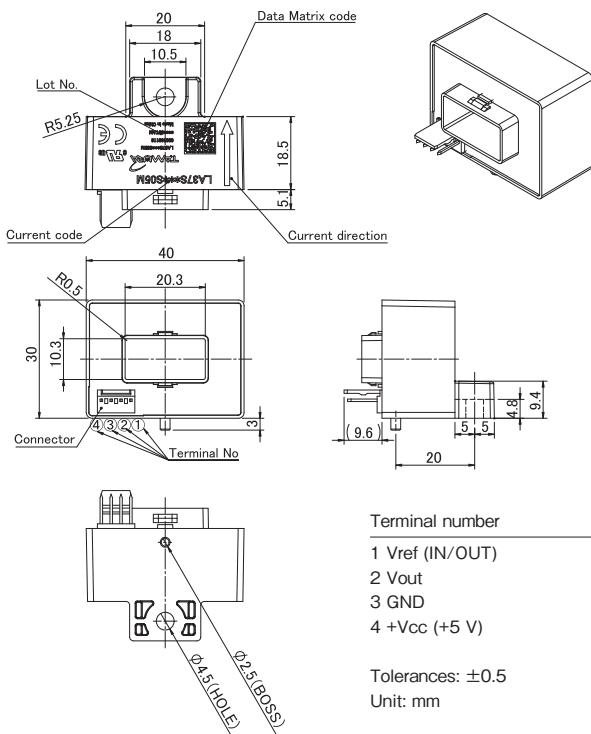

< Notice >

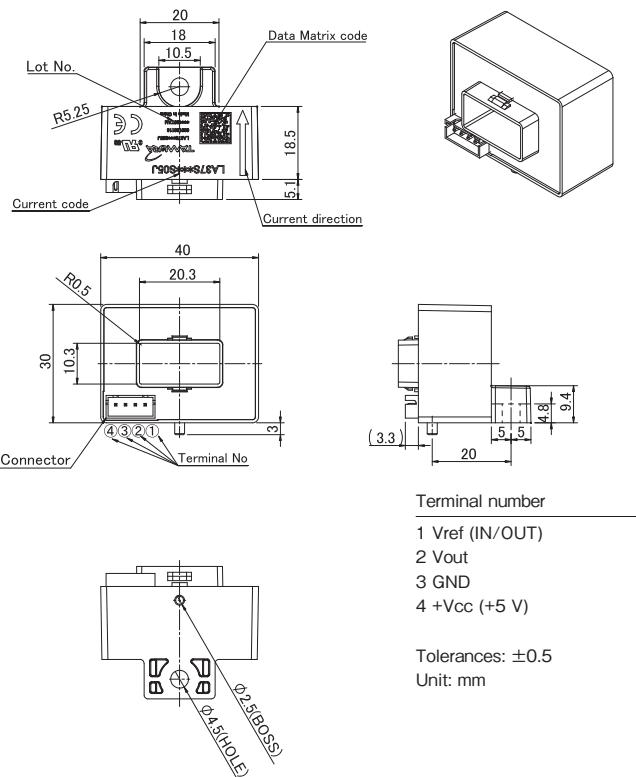

Sufficient capacitors are built into the product for the purpose of reducing output noise. Do not attach external capacitors to the V_{out} and V_{ref} terminals.

DIMENSIONS (mm)

LA37SxxxS05M(M-A) Series

LA37SxxxS05J Series

- Recommended fastening screw type : M4 with flat washer and spring washer
- Recommended fastening torque : < 1.5 N · m

Note

It is different from how to put the pin numbering of connector manufacturer (JST). It is matched to the Molex type.

Order number and Connector number (terminal plating)

Types		Connector			
		Manufacturer	Part Number	Old Part Number	Plating of terminal
LA37SxxxS05J	Standard	JST	B4B-XH-A-G	—	Au
LA37SxxxS05M	Standard	Molex	22-04-1041	5045-04A	Sn
LA37SxxxS05M-A	Build to Order		22-11-1041	5045-04AG	Au

* Rated current (3 figures)

* As for the LA37SxxxS05M series of a gold-plated connector, ' -A' attaches to the end of the product name.

* The pin numbers of LA37SxxxS05J are different from those of the connector maker (JST). It is matched to the Molex type.

Magnetic Proportion System / Through Type, Non ratiometric output, Vref-OUT/IN mode, $\Delta V_{out} = 625mV@I_{PN}$

SUPPORT DOCUMENTATION

Reference voltage

The Ref pin can be used as Ref OUT mode and/or Ref IN mode.

<Ref OUT mode>

The 2.5 V internal reference is used by the transducer as the reference point for bipolar measurements.

<Ref IN mode>

An external reference voltage is connected to the Ref pin. This voltage is specified in the range 0.5 to 2.65 V, its voltage is used as the offset voltage at the measurement.

The following graphs (Fig 1) show the output voltage (@ $I_p = 0A$) and the reference input / output current due to the external reference voltage value V_{ref2} .

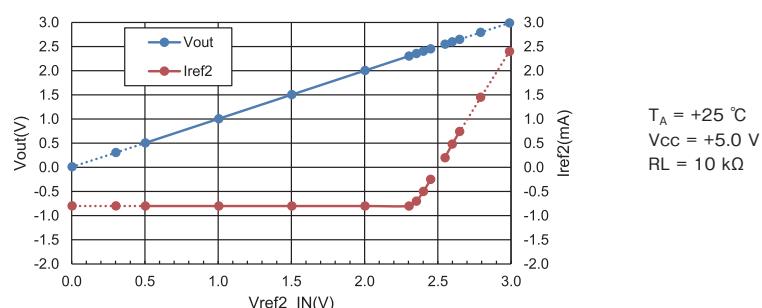

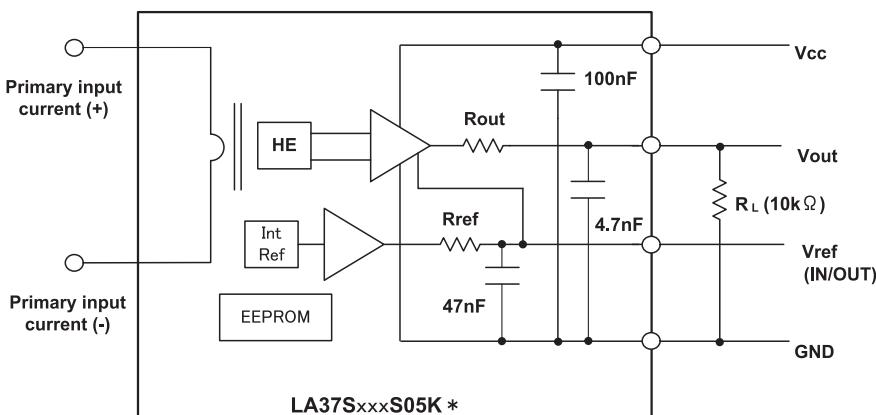

Fig 1 : V_{ref2} input voltage vs Output voltage and I_{ref2} (= V_{ref2} current)
(Typical performance)

CONNECTION

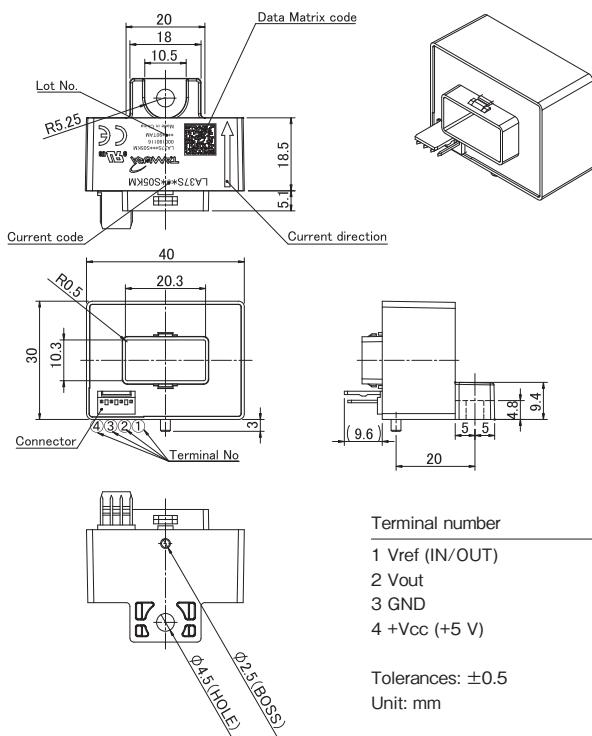

< Notice >

Sufficient capacitors are built into the product for the purpose of reducing output noise. Do not attach external capacitors to the **V_{out}** and **V_{ref}** terminals.

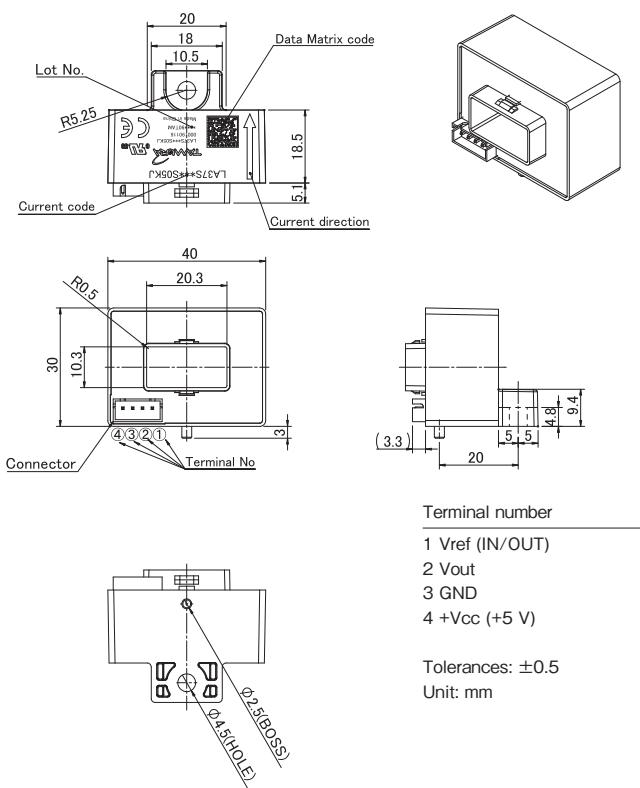

DIMENSIONS (mm)

LA37SxxxS05KM(M-A) Series

- Recommended fastening screw type : M4 with flat washer and spring washer
- Recommended fastening torque : < 1.5 N · m

LA37SxxxS05KJ Series

Note

It is different from how to put the pin numbering of connector manufacturer (JST). It is matched to the Molex type.

Order number and Connector number (terminal plating)

Types		Connector			
		Manufacturer	Part Number	Old Part Number	Plating of terminal
LA37SxxxS05KJ	Standard	JST	B4B-XH-A-G	—	Au
LA37SxxxS05KM	Standard	Molex	22-04-1041	5045-04A	Sn
LA37SxxxS05KM-A	Build to Order		22-11-1041	5045-04AG	Au

* Rated current (3 figures)

* As for the LA37SxxxS05KM series of a gold-plated connector, ' -A' attaches to the end of the product name.

* The pin numbers of LA37SxxxS05KJ are different from those of the connector maker (JST). It is matched to the Molex type.

Rated voltage 600 V, CAT III, PD2, Reinforced isolation, non uniform field

UL508, CSA C22.2 No.14 (UL FILE No. E243511)

Rated voltage 600 V, PD2

The devices have been evaluated that they are intended to be supplied from an isolated secondary circuit of Limited Voltage/Current circuit or Limiting Impedance circuit defined in United States Standard or Industrial Control Equipment, UL 508.

※ Please refer to the another sheet about conditions of UL Recognition.

CHARACTERISTIC CURVE (TYP)

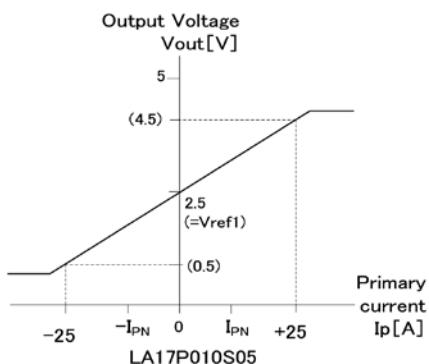

Fig 1 : Linearity curve Internal reference voltage)

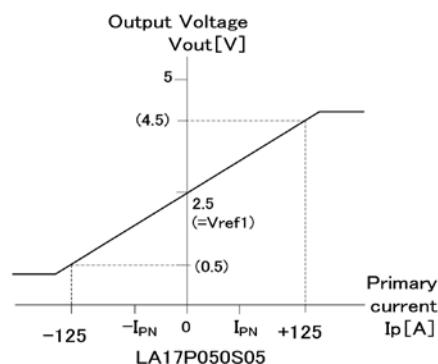

Fig 2 : Linearity curve Internal reference voltage)

SUPPORT DOCUMENTATION

Reference voltage

The Ref pin can be used as Ref OUT mode and/or Ref IN mode.

<Ref OUT mode>

The 2.5 V internal reference is used by the transducer as the reference point for bipolar measurements.

<Ref IN mode>

An external reference voltage is connected to the Ref pin. This voltage is specified in the range 0.5 to 2.65 V, its voltage is used as the offset voltage at the measurement.

The following graphs (Fig3) show the output voltage (@ $I_p = 0A$) and the reference input / output current due to the external reference voltage value V_{ref2} .

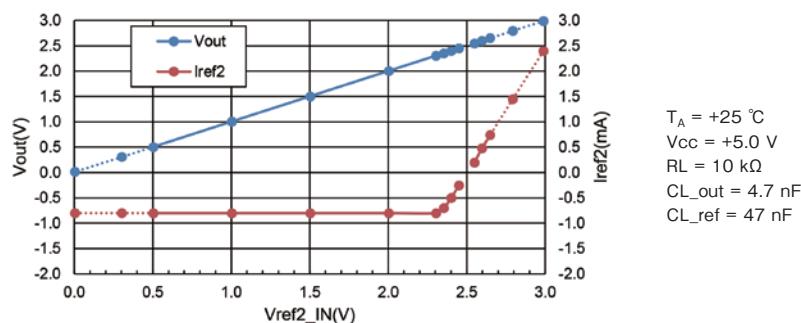

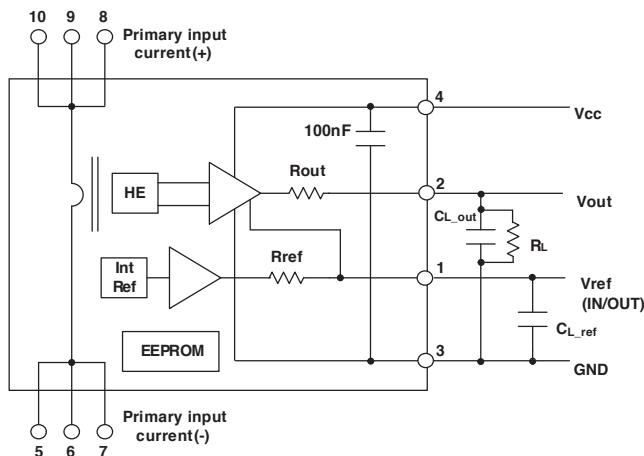

Fig 3 : V_{ref2} input voltage vs Output voltage and I_{ref2} (= V_{ref2} current)
(Typical performance)

CONNECTION

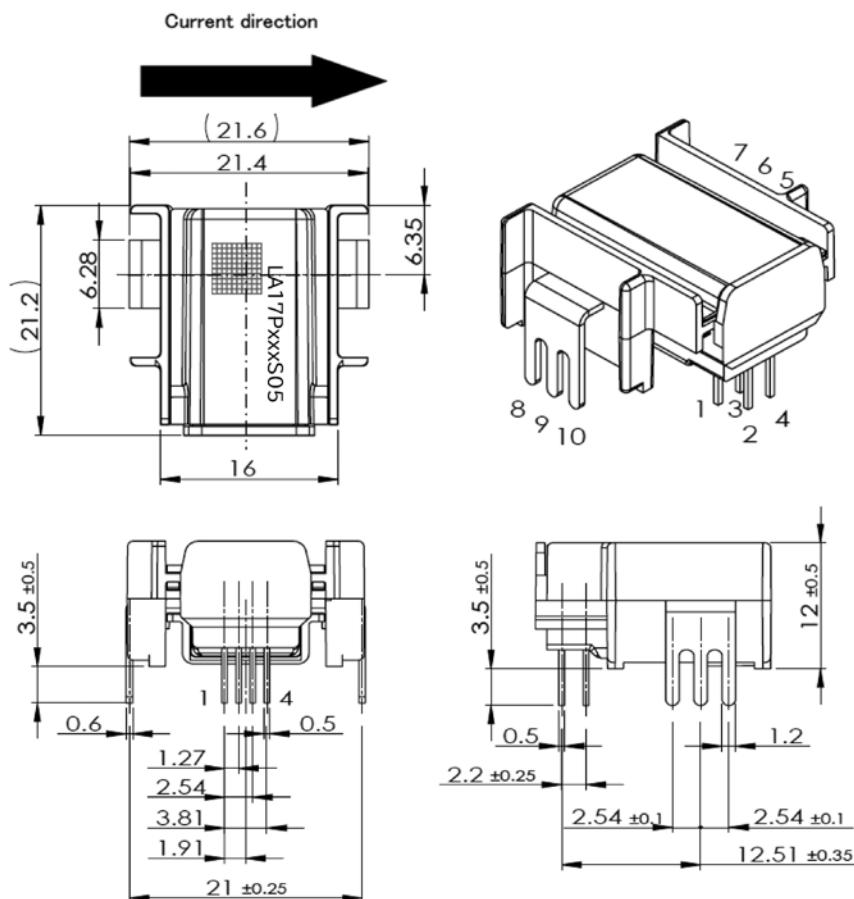

Condition (Standard)
 $C_1 = 100 nF$
 $C_{L_ref} = 0.5 nF MIN , 4.7 nF MAX$
 $C_{L_out} = 4.7 nF MAX$
 $R_L = 10k\Omega$

< Notice >

- Capacitors are recommended for V_{out} and V_{ref} terminals in order to reduce the noise of the output voltage.

V_{out} terminal : 4.7 nF, V_{ref} terminal : 47 nF.

* 5 High fundamental frequency primary current and/or harmonic current may result in excessive heating in magnetic core (Silicon steel).

STANDARDS

EN62477-1 : 2012 and EN62477-1 : 2012/A11 2014, UL508 (No.E243511) , CSA22.2 No.14-13

※ Please refer to the another sheet about conditions of UL Recognition.

TYPICAL CHARACTERISTIC CURVES

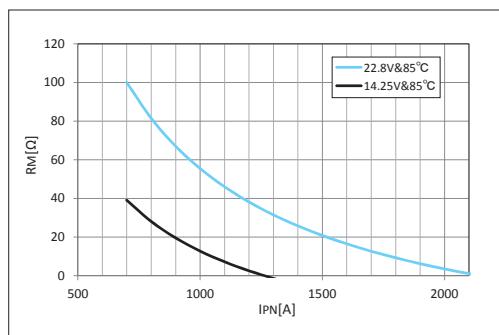

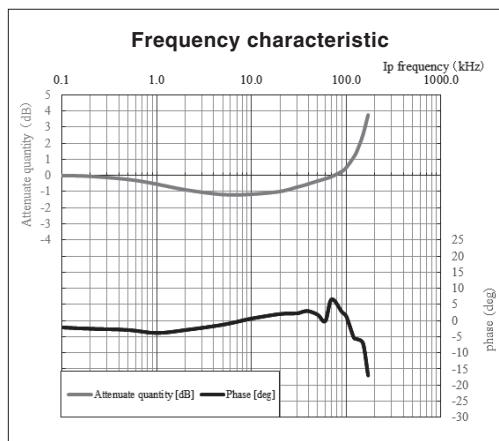

Figure 1 : Maximum Measuring Resistance

Measurement conditions:
 $T_A=+25^\circ\text{C}$, $R_M=2.4 \Omega$, $I_p=3\text{A} * 20\text{T}$, $Vcc=\pm 24\text{V}$

Figure 2 : Frequency response curve

CONNECTION

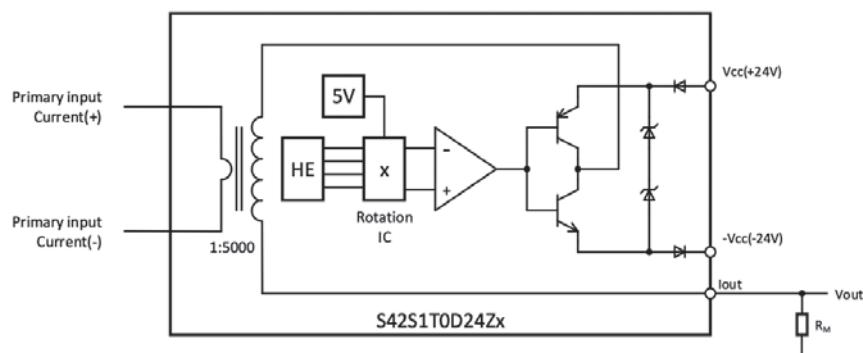

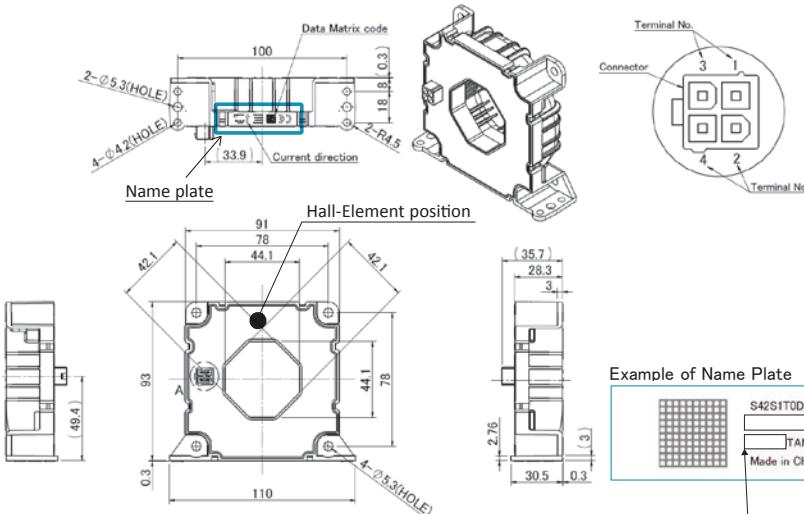

Figure 3 : Block diagram

DIMENSIONS (mm)

S42S1T0D24Z

Terminal number

- 1 N.C
- 2 Vcc (+24V)
- 3 -Vcc (-24V)
- 4 Iout

Tolerance : ±0.5

Unit : mm

Connector

Maker	PartsNo.	old parts No.
Molex	39-28-8040	5566-04A-210

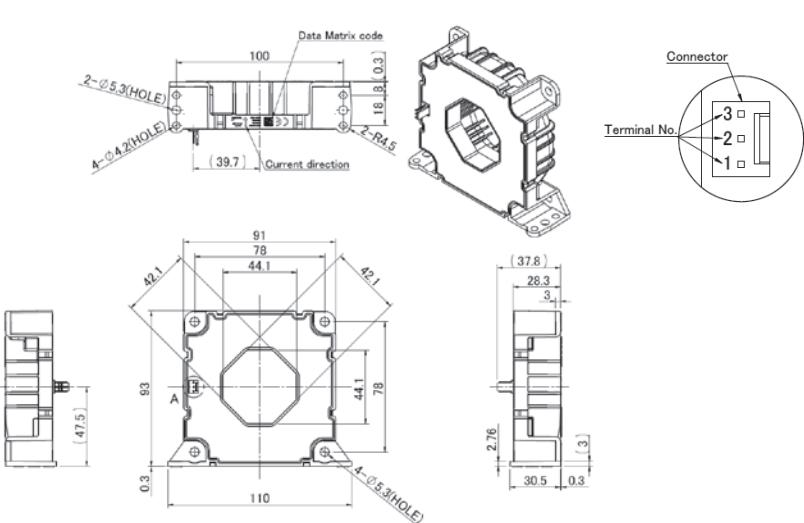

Example of Name Plate

Revision code(5 figure), Lot No.(5 figure)

Serial No.(4 figure), Factory code(2 figure)

S42S1T0D24ZM

Terminal number

- 1 Vcc(+24V)
- 2 Iout
- 3 -Vcc(-24V)

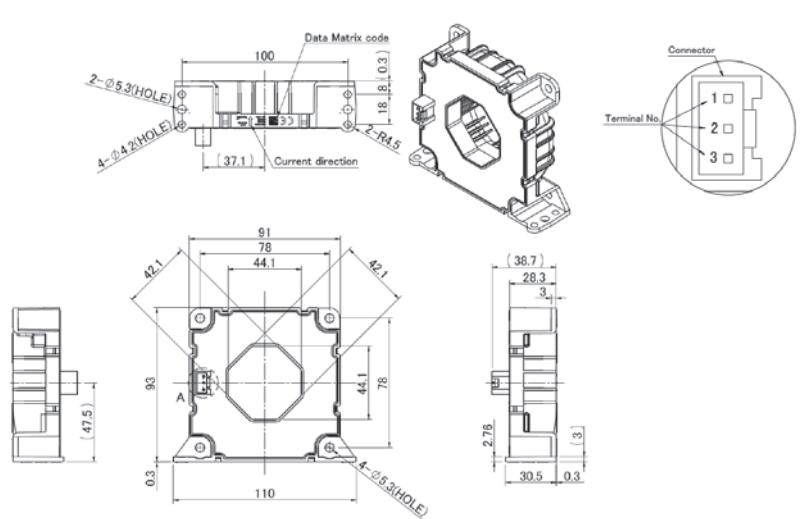

Tolerance : ±0.5

Unit : mm

Connector

Maker	PartsNo.	old parts No.
Molex	38-00-6293	AE-6410-03C(197)

S42S1T0D24ZJ

Terminal number

- 1 -Vcc(-24V)
- 2 Iout
- 3 Vcc(+24V)

Tolerance : ±0.5

Unit : mm

Connector

Maker	PartsNo.	old parts No.
