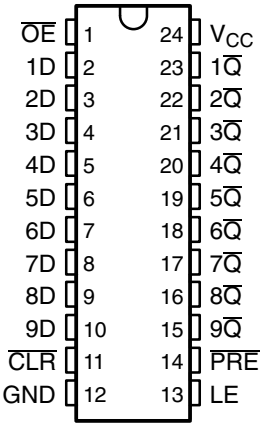
CD74FCT844A
BiCMOS 9-BIT BUS-INTERFACE D-TYPE LATCH WITH 3-STATE OUTPUTS

SCBS728 – JULY 2000

- **BiCMOS Technology With Low Quiescent Power**
- **Buffered Inputs**
- **Inverted Outputs**
- **Input/Output Isolation From V_{CC}**
- **Controlled Output Edge Rates**
- **48-mA Output Sink Current**
- **Output Voltage Swing Limited to 3.7 V**
- **SCR Latch-Up-Resistant BiCMOS Process and Circuit Design**
- **Packaged in Standard Plastic DIP**

EN PACKAGE
(TOP VIEW)



description

The CD74FCT844A is a 9-bit, D-type latch with 3-state outputs, designed specifically for driving highly capacitive or relatively low-impedance loads. It is particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The device uses a small-geometry BiCMOS technology. The output stage is a combination of bipolar and CMOS transistors that limits the output high level to two diode drops below V_{CC}. This resultant lowering of output swing (0 V to 3.7 V) reduces power-bus ringing [a source of electromagnetic interference (EMI)] and minimizes V_{CC} bounce and ground bounce and their effects during simultaneous output switching. The output configuration also enhances switching speed and is capable of sinking 48 mA.

The CD74FCT844A outputs are transparent to the inputs when the latch-enable (LE) input is high. When LE goes low, the data is latched. The output-enable ($\overline{OE}$) input controls the 3-state outputs. When $\overline{OE}$ is high, the outputs are in the high-impedance state. The latch operation is independent of the state of $\overline{OE}$. This device, having preset ($\overline{PRE}$) and clear ($\overline{CLR}$), is ideal for parity-bus interfacing. When $\overline{PRE}$ is low, the outputs are high if $\overline{OE}$ is low. $\overline{PRE}$ overrides $\overline{CLR}$. When $\overline{CLR}$ is low, the outputs are low if $\overline{OE}$ is low. When $\overline{CLR}$ is high, data can be entered into the latch.

$\overline{OE}$ can be used to place the nine outputs in either a normal logic state (high or low logic levels) or the high-impedance state. The outputs also are in the high-impedance state during power-up and power-down conditions. The outputs remain in the high-impedance state while the device is powered down. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without interface or pullup components.

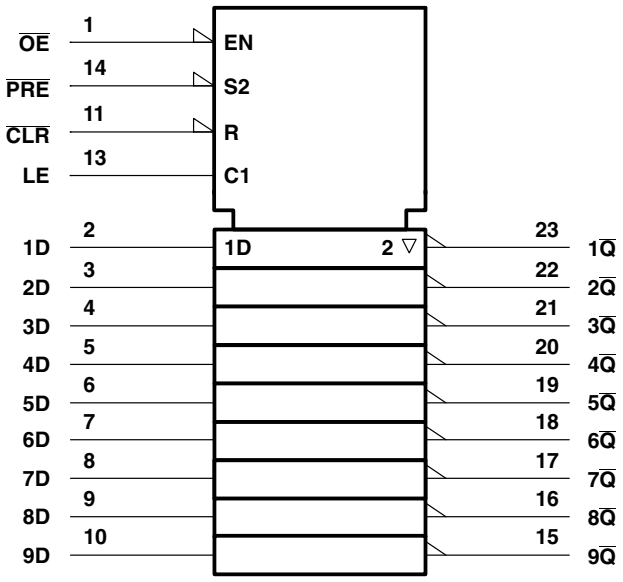
$\overline{OE}$ does not affect the internal operations of the latch. Previously stored data can be retained or new data can be entered while the outputs are in the high-impedance state.

The CD74FCT844A is characterized for operation from 0°C to 70°C.

FUNCTION TABLE
(each latch)

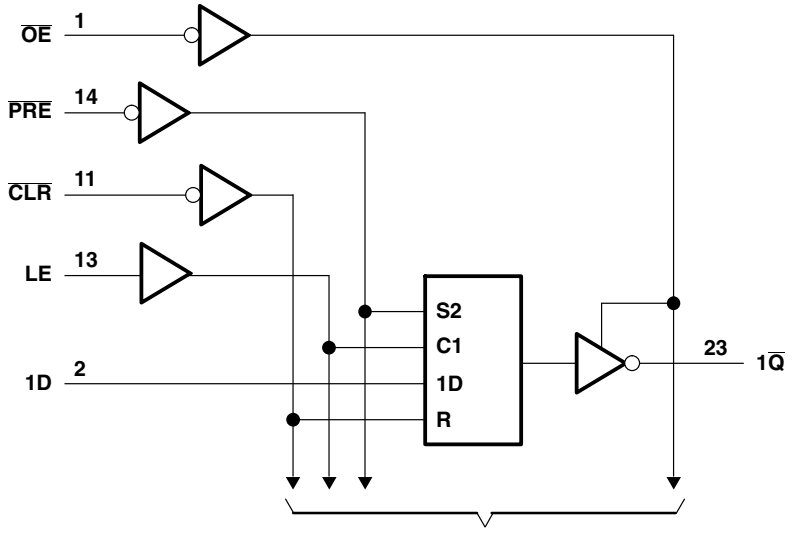
INPUTS					OUTPUT
$\overline{PRE}$	$\overline{CLR}$	$\overline{OE}$	LE	D	Q
L	X	L	X	X	H
H	L	L	X	X	L
H	H	L	H	L	H
H	H	L	H	H	L
H	H	L	L	X	Q_0
X	X	H	X	X	Z

logic symbol†



† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)



absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

DC supply voltage range, V_{CC} . . . . . –0.5 V to 6 V
DC input clamp current, I_{IK} (V_I < –0.5 V) . . . . . –20 mA
DC output clamp current, I_{OK} (V_O < –0.5 V) . . . . . –50 mA
DC output sink current per output pin, I_{OL} . . . . . 70 mA
DC output source current per output pin, I_{OH} . . . . . –30 mA
Continuous current through V_{CC}, (I_{CC}) . . . . . 237 mA
Continuous current through GND . . . . . 453 mA
Package thermal impedance, θ_{JA} (see Note 1) . . . . . 67°C/W
Storage temperature range, T_{stg} . . . . . –65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The package thermal impedance is calculated in accordance with JESD 51.

recommended operating conditions (see Note 2)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	4.75	5.25	V
V_{IH}	High-level input voltage	2		V
V_{IL}	Low-level input voltage		0.8	V
V_I	Input voltage	0	V_{CC}	V
V_O	Output voltage	0	V_{CC}	V
I_{OH}	High-level output current		–15	mA
I_{OL}	Low-level output current		48	mA
$\Delta t/\Delta v$	Input transition rise or fall rate	0	10	ns/V
T_A	Operating free-air temperature	0	70	°C

NOTE 2: All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.

electrical characteristics over recommended operating temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS		V_{CC}	T_A = 25°C		MIN	MAX	UNIT
				MIN	MAX			
V_{IK}	I_I = –18 mA		4.75 V		–1.2		–1.2	V
V_{OH}	I_{OH} = –15 mA		4.75 V	2.4		2.4		V
V_{OL}	I_{OL} = 48 mA		4.75 V		0.55		0.55	V
I_I	$V_I = V_{CC}$ or GND		5.25 V		±0.1		±1	μA
I_{OZ}	$V_O = V_{CC}$ or GND		5.25 V		±0.5		±10	μA
I_{OS}†	$V_I = V_{CC}$ or GND,	V_O = 0	5.25 V	–75		–75		mA
I_{CC}	$V_I = V_{CC}$ or GND,	I_O = 0	5.25 V		8		80	μA
ΔI_{CC}‡	One input at 3.4 V, Other inputs at V_{CC} or GND		5.25 V		1.6		1.6	mA
C_i	$V_I = V_{CC}$ or GND				10		10	pF
C_o	$V_O = V_{CC}$ or GND				15		15	pF

† Not more than one output should be tested at a time, and the duration of the test should not exceed 100 ms.
‡ This is the increase in supply current for each input at one of the specified TTL voltage levels rather than 0 V or V_{CC}.

timing requirements over recommended operating temperature conditions (unless otherwise noted) (see Figure 1)

			MIN	MAX	UNIT
t_w	Pulse duration	CLR low	8		ns
		$\overline{PRE}$ low	8		
		LE low	4		
t_{su}	Setup time	Data before LE↓	2.5		ns
		$\overline{PRE}$ inactive	2.5		
		$\overline{CLR}$ inactive	2.5		
t_h	Hold time	Data before LE↓	2.5		ns
t_{rec}	Recovery time	$\overline{PRE}$, $\overline{CLR}$	14		ns

switching characteristics over recommended operating temperature conditions (unless otherwise noted) (see Figure 1)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	T_A = 25°C	MIN	MAX	UNIT
			TYP			
t_{pd}	D	$\overline{Q}$	7.5	1.5	10	ns
	LE		9	1.5	12	
t_{PLH}	$\overline{PRE}$	$\overline{Q}$	9	1.5	12	ns
t_{PHL}	$\overline{CLR}$		9.8	1.5	13	
t_{en}	$\overline{OE}$	$\overline{Q}$	10.5	1.5	14	ns
t_{dis}	$\overline{OE}$	$\overline{Q}$	6	1.5	8	ns

noise characteristics, V_{CC} = 5 V, C_L = 50 pF, T_A = 25°C

PARAMETER		MIN	TYP	MAX	UNIT
$V_{OL(P)}$	Quiet output, maximum dynamic V_{OL}		1		V
$V_{OH(V)}$	Quiet output, minimum dynamic V_{OH}		0.5		V
$V_{IH(D)}$	High-level dynamic input voltage	2			V
$V_{IL(D)}$	Low-level dynamic input voltage			0.8	V

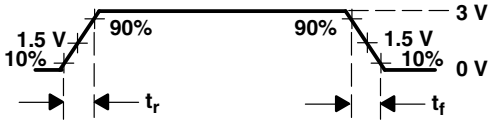
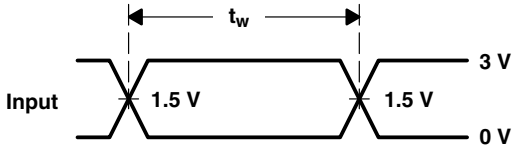
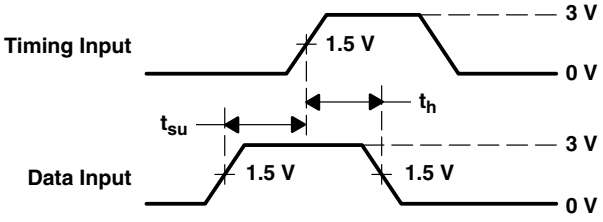
Open Drain	7 V



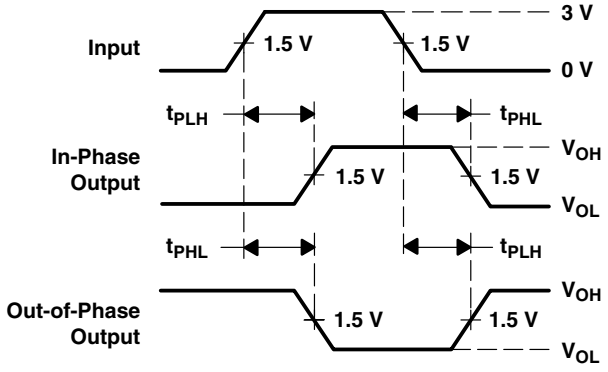
VOLTAGE WAVEFORM
INPUT RISE AND FALL TIMES



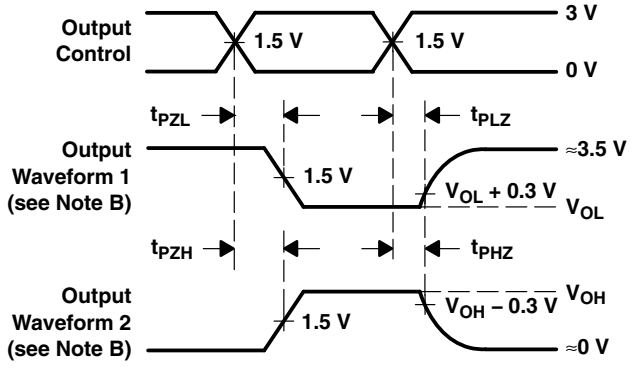
VOLTAGE WAVEFORMS
PULSE DURATION



VOLTAGE WAVEFORMS
SETUP AND HOLD TIMES



VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES
INVERTING AND NONINVERTING OUTPUTS



VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES
LOW- AND HIGH-LEVEL ENABLING

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z_O = 50 Ω, t_r and t_f = 2.5 ns.
D. The outputs are measured one at a time with one input transition per measurement.
E. t_{PLZ} and t_{PHZ} are the same as t_{dis}.
F. t_{PZL} and t_{PZH} are the same as t_{en}.
G. t_{PHL} and t_{PLH} are the same as t_{pd}.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Top-Side Markings (4)	Samples
CD74FCT844AEN	OBSOLETE	PDIP	NT	24		TBD	Call TI	Call TI	0 to 70		

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

4040050/C 04/09

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. The 28 pin end lead shoulder width is a vendor option, either half or full width.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
